

UFOS

Photo taken on 1st August 1993 , Shanklin, Isle of Wight

Sir Patrick Moore resident genius of TV's 'The Sky at Night' was recently asked if he had ever seen a UFO?

"Yes, in my observatory one day. I saw a huge fleet of perfect flying saucers. 'The Martians have arrived,' I thought. Then I find out what it really was... Pollen!" (laughs)

Patrick Moore really has let the cat of the bag - many UFO images are not seen through the naked eye but through a lens. Often an image thought to be an UFO is in fact an insect on the camera lens. Also, through a glitch of some cameras, UFO like images can also be captured. In fact both the UFO images on this page are in reality illusions -wherein the camera has taken photos of its own shutter!
